

Saccades

Tova Carlin

Just thought I would let you know, coming to LA for a visit. Was hoping I could stay at your place?

There's a new technology (2014) that scans texts and streams words, one at a time, directly to the reader, in order to "change the way people read and make communication faster, easier, and more effective."

In feeding the words sequentially, the tech effectively eliminates time lost through saccades, the involuntary scanning eye movement that occurs during reading.

Just think, you could move the least amount possible while reading the shortest possible sentence in the least amount of time.

How many personal pronouns are necessary to hold together a message?
